Installing Node
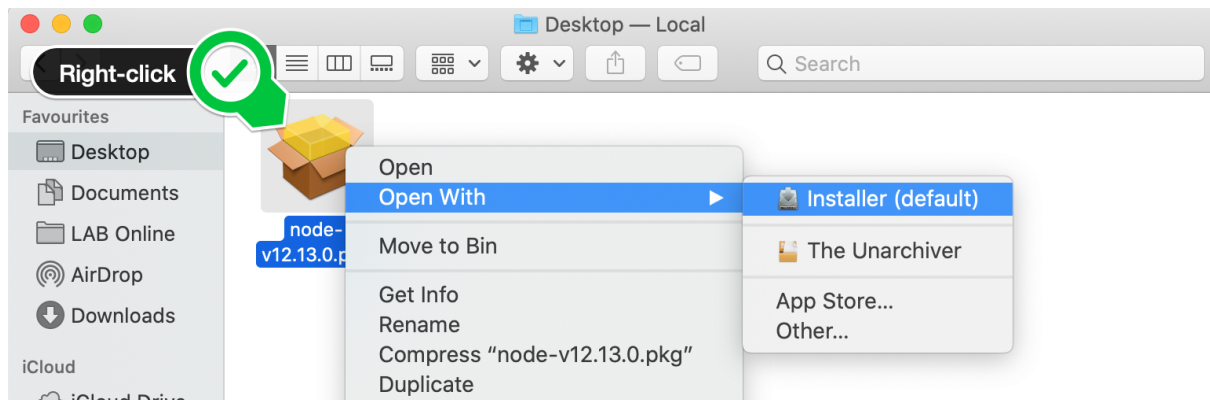

On Mac

- Download the mac installer from: https://nodejs.org/en/

- Choose the LTS version, it shown on the left.
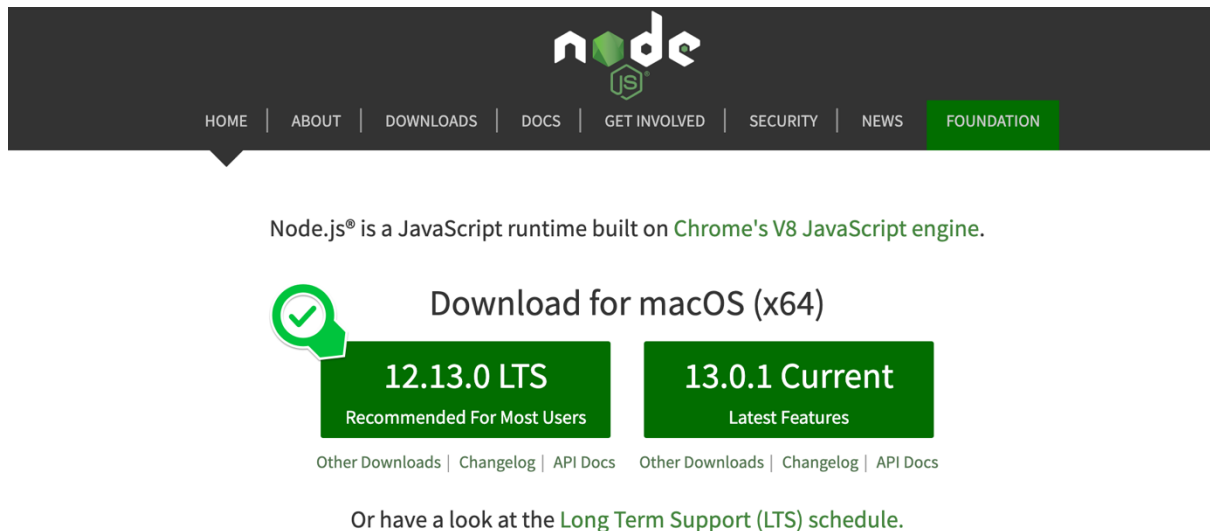

- Run the installer

  - You might get a warning pop up that looks like this:
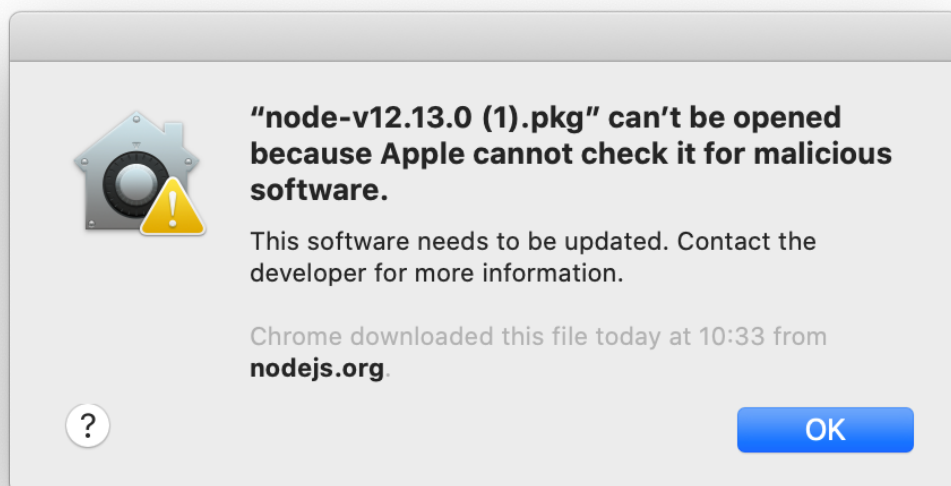

- To solve this issue, just right click (hold down the ctrl key on keyboard and click) on the .pkg file and select "Open With" and then select "Installer (default)".

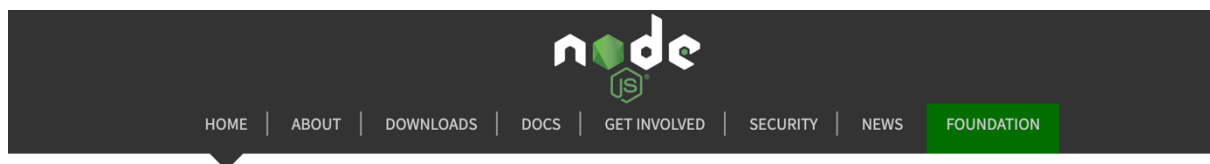

- Follow the prompts in installer

- Confirm that node has been installed successfully by opening a Hyper terminal and entering the command.

  node --version

- You should see the version of node you have just installed.

On Windows

- Download the mac installer from: https://nodejs.org/en/

- Choose the LTS version, it shown on the left.

- Run the installer (the .msi file you downloaded in the previous step)

- Follow the prompts in the installer
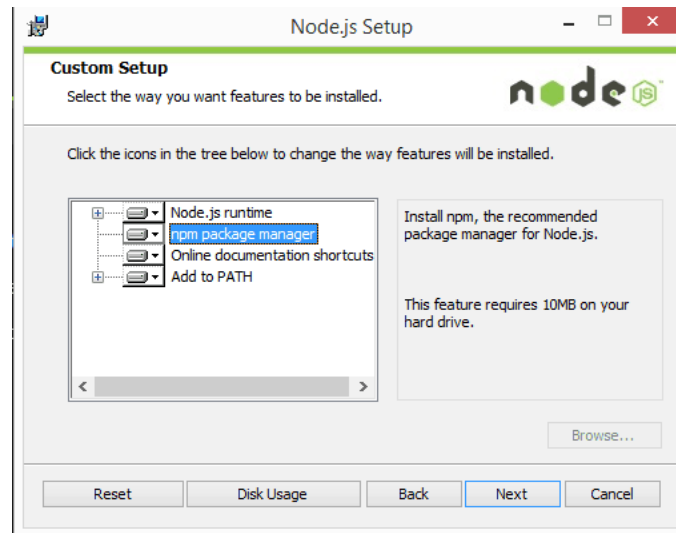

- Restart your computer. You won't be able to run Node.js until you restart your computer.

- Confirm that node has been installed successfully by opening a Hyper terminal and entering the command.

  node --version

- You should see the version of node you have just installed.
